

Palliative Care Pathway

The Wales Map of Palliative Care has been developed on behalf of the All Wales Palliative Care Implementation Group. Its aim is to facilitate understanding of the needs and care journey of patients approaching the end of life.

It has been developed by a multidisciplinary group, ensuring all aspects of care are addressed, and encourages consideration of key assessments and interventions triggered by changes in condition or prognosis.

The front page provides an overview of the patient journey and allows clinicians to focus on the complete pathway. By clicking on individual components, guidance on specific assessments and interventions may be accessed with links to integrated guidelines and other national resources.
